DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I (claims 1-15) in the reply filed on 5/25/2005 is acknowledged. The traversal is on the grounds that the claims are sufficiently related to be examined together. This is not found persuasive because the groups are mutually exclusive in subject matter, Group I is directed to the structure of the electrostatic actuator while Group II is directed to how an electrostatic actuator is operated which does not require the structure of Group I. The mutually exclusive subject matter in the independent claims is evidence that the Applicant believes the subject matter to be separate inventions. The requirement is still deemed proper and is therefore made FINAL.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

3. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

4. The use of the trademarks KAPTON®, MYLAR®, and KALADDEX®, have been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horning et al. (Horning)(US 2002/0125790) and Ohnstein (US 5180623). Horning teaches multiple electrostatic actuators having two polymeric sheets 112 having conductive 111 and dielectric 114 layers, where the sheets are secured together by

adhesive 120. Horning teaches on sheet being flat (figure 6) or both sheets bowing (figure 7). Horning teaches multiple actuators laminated to form a stack. Horning does not teach the circular shape, the egress hole or the conductive and dielectric layers being films. Ohnstein teaches a circular shaped electrostatic actuator (figure 6a, 6b) with the conductive 8 and dielectric 15 layers being stacked to form the actuator with an egress hole 6 to form a valve. It would have been obvious to a person of ordinary skill in the art at the time of the invention to construct the actuator of Horning with the dielectric and conductive layers being circular films with an egress hole to form a valve with a mating surfaces between the electrodes.
